An investment in the Funds is subject to investment risk, including the possible loss of principal. Pacer ETF shares may be bought and sold on an exchange through a brokerage account. Brokerage commissions and ETF expenses will reduce investment returns. There can be no assurance that an active trading market for ETF shares will be developed or maintained. The risks associated with this fund are detailed in the prospectus and could include factors such as concentration risk, derivatives risk, dividends risk, equity market risk, ETF risks, futures contract risk, government obligations risk, index provider risk, large-capitalization investing risk, limited operating history risk, non-diversification risk, other investment companies risk, passive investment risk, tracking error risk, trading halt risk, and/or special risks of exchange traded funds.

The Metaurus US Large Cap Dividend Multiplier Index – Series 400 (the “Index”) is the property of Metaurus Advisors LLC which has contracted with S&P Opco, LLC (a subsidiary of S&P Dow Jones Indices LLC) to calculate and maintain the Index. The Index is not sponsored by S&P Dow Jones Indices or its affiliates or its third party licensors (collectively, “S&P Dow Jones Indices”). S&P Dow Jones Indices will not be liable for any errors or omissions in calculating the Index. “Calculated by S&P Dow Jones Indices” and the related stylized mark(s) are service marks of S&P Dow Jones Indices and have been licensed for use by Metaurus Advisors. **Dividends Risk:** There can be no assurance that a dividend-paying company will continue to make regular dividend payments. The ability for a company to pay dividends is dependent on the economic climate and the companies' current earnings and capital resources. Changes in economic conditions or a company's earnings or financial resources could cause a company to reduce its dividend payments or suspend the payment of dividends altogether. The possibility that such companies could reduce or eliminate the payment of dividends in the future, especially if the companies are facing an economic downturn, could negatively affect the Fund's performance.

The **S&P 500® Index** is a popular gauge of large-cap U.S. equities and includes 500 leading companies, capturing approximately 80% coverage of available market capitalization.

**NAV** (net asset value) is the value of one share of the Fund calculated daily. The NAV return is based on the NAV of the Fund. It may not reflect the actual return for the investor.

**Market Price** is the price investors can buy and sell ETF shares for in the stock market and is used to calculate market return. It is based on the price at the NYSE exchange market close. This is when NAV is determined for most ETFs. If shares trade at another time, the return may differ. Market and NAV returns assume that dividends and capital gain distributions have been reinvested in the Fund at market price and NAV, respectively.

Metaurus Advisors LLC serves as investment sub-advisor to the Fund.
